## Minimal maintenance required

Project:	Bombardier's Ft. Lauderdale Service Center
Location:	Ft. Lauderdale, FL
Size:	54,000
Completed:	November 20, 2008
Original Finish:	Epoxy
Process:	Diamond Polished

Bombardier's Ft. Lauderdale Service Center was polished in the fall of 2008. Utilizing a 7 step process, the existing epoxy was removed from the floor using bobcats and half-ton grinders which polished the floor to a high gloss finish. The facility saw the following benefits as a result of our process:

Brighter facility - High gloss floors increase the reflectivity of light.

Long-term solution - Without topical coatings, there is nothing to peel, chip, or flake.

No curing time - When we leave, your space is ready for operations to resume.

Minimal maintenance - Just a mop or autoscrubber can keep your floor looking beautiful.

Increased durability - Our densifier hardens and dustproofs the floor.

Green - An environmentally friendly process that counts towards LEED-NC points.

Safe - Wet or dry, it meets and exceeds OSHA standards.

## A high gloss finish with no topical coatings
